

## ABSTRACT

A recording medium holder for accommodating a recording medium which records information is disclosed. The recording medium holder has an accommodating member which forms a first accommodating region being capable of accommodating at least one sheet of the recording medium to be held and a second accommodating region being capable of accommodating at least one recording device for recording relevant data generated in relation to the processing of information by an information processing apparatus. The accommodating member includes a recording medium holding portion for positioning and holding the recording medium to be held in the first accommodating region and a recording device holding portion for positioning and holding the recording device to be held in the second accommodating region.
